Abstract (en)
[origin: EP2383510A2] The device has a discharge tube (1) in a transparent protective tube (3). Terminal bases (5) are located at ends of protective tube. A metallic terminal tab (4) from each terminal base contacts a terminal in each of terminal sockets at ends of a carrier (9). The terminal and the tab are formed or partially coated with anticorrosive metal. The walls of socket and/or terminal base are formed of ceramic. The terminal base has a projection that is fit into the recess formed in the socket for making contact between tab and the terminal base.
