Abstract (en)

[origin: EP2383532A2] The body (1) has a front side (1a) turned towards an inner area of a furnace, rear side (1b) and edge sides (1c, 1d, 1e, 1f) connecting the front side with the rear side. A base body (2) is made of ceramic material e.g. recrystallized silicon carbide or nitride and oxy-nitride bonded silicon carbide, and a front-sided plate (3) made of another ceramic material e.g. siliconized silicon carbide, sintered silicon carbide or hot isostatic pressed silicon carbide, is arranged at a front side of the base body. The latter ceramic material has porosity lower than that of the former ceramic material.
