Abstract (en)  
[origin: EP2383704A1] The present invention provides a coin dispenser that can reliably dispense even a magnetic coin C1. A coin stopper 51 is retracted from a dispensing belt 33 by a solenoid 52 to allow a coin to pass through. After the coin stopper 51 is advanced to a position on the coin surface of the coin C1 to be dispensed by the solenoid 52, the coin stopper 51 is advanced to a position on the dispensing belt 33 before the coin next in line to block passage of the coin next in line. A portion that comes into contact with the coin C1 of the coin stopper 51 is made of a nonmagnetic material, and even a magnetic coin C1 is reliably dispensed.
