Abstract (en)  
[origin: WO2010086236A1] The invention relates to a vacuum interrupter (1) with at least one substantially cylindrical, electrically insulating housing part (3), which is connected in vacuum-tight fashion to a metal part (9). In this case, the metal part has been provided with a field control element (13). The field control element (13) is arranged in a cutout (5) in the housing part (3) in such a way that the field control element (13) is arranged so as to be recessed with respect to the outer lateral surface of the housing part (3) or terminates flush with the outer lateral surface.
