Abstract (en)

[origin: EP2384854A2] The tool (22) has a flexible layer (26) arranged between a polishing sheet (28) and a carrier body (24), where an edge region of the polishing sheet is limited by a base circle (46) in radial direction (40). Edge elements (48) outwardly approximately extend about 4 mm from the base circle in the radial direction and are formed as teeth, where contour of each edge element ends in an end point (54). An active surface (29) of the polishing sheet outwardly and continuously decreases up to zero in the edge region of the sheet in the radial direction.
