Abstract (en)
[origin: EP2385196A2] The lock (1) has a lock mechanism controlling a latch bolt (8) and/or a locking bar (7), and an actuating handle (9) i.e. knob, connected with the lock mechanism via a releasing device for actuating the latch bolt and/or the locking bar. The actuating handle is connected with press plates (11) of a press nut (10) in a torque proof manner. A rocker switch co-acts with the press plates for releasing the lock, and is adjustable via a selection switch in reference to the press plates. The press plates are designed as cam plates, and the selection switch comprises a spindle.
