Abstract (en)
A hinge is described, adapted to allow locking mobile frameworks and to operate as blind-stopper, window-stopper, opening restrictor, anti-theft device, door-stopper; the hinge is composed of a male hinge component (1, 1', 1'', 1''', 1'''') and a female hinge component (2, 2', 2'', 2''', 2'''') adapted to be operatively coupled with the male hinge component (1, 1', 1'', 1''', 1''''), that is equipped with a pin (6, 6', 6'', 6''', 90) that is partially shaped and partially smooth, while the female hinge component (2, 2', 2'', 2''', 2'''') is equipped with a bush (1, 7', 7'', 7''', 70) shaped in order to allow, through the coupling with the shaped pin (6, 6', 6'', 6''', 90), an on-off latch movement of the hinge with consequent locking of the mobile framework in a plurality of positions in a range of rotation from 0° to 180° of the mobile framework around the hinge.
