Abstract (en)
[origin: EP2385576A2] The device (2) has a seat element (8) i.e. chair, comprising a seat surface (14), a back support (26) and a backrest element (32) fastened to the back support, where the backrest element is designed as a satellite reception flat antenna. The flat antenna is designed for receiving satellite signals in a frequency range of about 10.7-12.75 giga Hertz. The seat element has a receiving device (38) for receiving weights that stabilize the device, where the weights are formed as a stone- or concrete slab.
