Abstract (en)
[origin: WO2010079225A2] The tasting glass (1), of the type comprising a parison (2) having overall rotational symmetry about a vertical axis, includes inside said parison (2) a set of at least two identical ribs (7), distributed regularly on the periphery of the parison (2), extending approximately in a vertical plane, virtually from the bottom of the glass up to a height of the parison (2) lower than the normal filling level of the glass and different for each of the ribs (7). The tasting glass also includes a dome (8), located on the axis of the glass, at the bottom of the parison (2). The ribs (7) each have the form of a face of a fan blade. The invention also relates to a method of producing the glass according to the invention.
