Abstract (en)

[origin: WO2010079215A1] The invention relates to a bearing for attaching a module to the wall of a tyre, including a substantially flexible module having a substantially elongate shape, said body including a connection surface that can be substantially permanently placed against an inner wall of a tyre, a second free surface opposite the connection surface, and at least one substantially cylindrical recess having an axis normal to said second free surface of the body and opening onto said second free surface, characterised in that the recess includes a first substantially cylindrical portion extending into a chamber having a substantially cylindrical shape and coaxial to the first portion with a diameter larger than the diameter of said first portion of the recess.
