Abstract (en)

[origin: WO2010080042A1] The present invention concerns an energy transformation device with a chamber (2) and a supply system with at least one valve (3) for sequential supply of hydrogen and oxygen to the chamber (2). An ignition system ignites the mixture of hydrogen and oxygen such that it is formed a pressure increase and motion in the water in the chamber. A bleed off valve (21) is provided to bleed off water formed in the combustion. The bleed off valve forms the only outlet of the chamber (2) such that the chamber forms a closed system. Energy receiving elements (7) for receiving motion and pressure in the liquid are integrated with the chamber (2). Furthermore, it is described a method for operating an energy transformation device and a system with an energy transformation device.
