Abstract (en)

[origin: WO2010079027A1] The invention relates to a method for operation of a fuel injection system wherein fuel enters at least one combustion chamber of the internal combustion engine from an electromagnetically actuated injection valve (1) and wherein the movement of a valve element (3) influences said injection valve (1) at least temporarily by an electromagnetic brake impulse (16). A closing delay time of said injection valve (1) or a corresponding measurement is determined and the determined closing delay time or the corresponding measurement is used to determine at least one parameter of said brake impulse (16).
