Abstract (en)
[origin: EP2386453A1] The wagon has a movable side wall part (1) lying in a plane to close a luggage compartment of the wagon in a closed position. An upper edge (3) of the side wall part lies at a first carrier (2) in the closed position, and a cover flange (7) of the carrier extends over the upper edge. A sealing strip (9) is attached at the flange, where a connection (8) i.e. spring joint, between the flange and strip around a longitudinal axis is formed in a movable manner. The strip extends over entire length of the part, and the longitudinal axis is arranged parallel to a rotational axis of a pivot shaft (4).
