Abstract (en)

[origin: WO2010081518A2] The invention relates to a closure head for container closure machines (1) for closing bottles or similar containers with closures, having a head part, having a receptacle formed on a head part and open on the bottom of the closure head and the head part for one closure each, wherein the receptacle forms at least one radial and at least one axial contact surface relative to an axis of the receptacle for the closure received in the receptacle, and wherein the radial contact surface for at least force-fit retaining of the closure in the receptacle is formed of at least one displaceable segment displaceable at least radially to the axis of the receptacle at least in the area of the radial contact surface.
