Abstract (en)

[origin: WO2010082134A1] The invention relates to methods and compositions for the prevention and treatment of disease caused by *B. anthracis* or a bacterium which produces toxins or toxin components homologous to the virulence factors produced by *B. anthracis* or to the toxins or toxin components themselves, in the absence of bacteria. The methods and compositions of the invention comprise a combination of at least two antibodies, preferably monoclonal antibodies, most preferably human monoclonal antibodies, each of which binds with high affinity to a different bacterial antigen.
