Abstract (en)
[origin: EP2387880A1] The rod (1) has a piston element (9) moved in a position along which the piston element activates a cover (5) in a blocking position and moved in another position along which the piston element releases the cover in a releasing position. An abutment system (11) liberates the piston element in a triggering position. A counterweight (12) is fixed on a wired element (13) whose rear end (13a) is secured to the abutment system and front end (13b) is secured to the rod, where inertia of the counterweight allows movement of the abutment system in the triggered position.
