Abstract (en)
[origin: EP2387910A2] The system has a back part (2) comprising a carrier strip (16) with coupling members for coupling a housing (7), and electronic components arranged in an inner side of the housing. The carrier strip comprises a frame (8) for supporting loads, and the housing comprises coupling members at an end turned away from the back part. The housing and the frame are matched to height and width of the back part. The housing and the frame are directly coupled to the coupling members of the strip. The frame is connected to the coupling members of the housing. A lateral support (6) is connected to the strip.
