Abstract (en)

[origin: EP2388380A1] The device (1) has an actuating plate (5) for pivotably supporting buttons (6, 7) for releasing flushing liquid of a sanitary apparatus. A depth adjusting device (36) has an adjustment element (21) e.g. screw bolt and adjusting screw, supported in the plate, where the adjustment element is accessible from a rear side of the buttons for adjusting depth of the plate. The buttons are pivotable around a horizontal pivoting axis and formed as rocker switches. The adjustment element is supported at a latch of the plate such that the adjusting element is rotated around an axis. An independent claim is also included for a method for mounting an actuating device.
