Abstract (en)

[origin: EP2388522A2] The monitoring device has a detector (5) for detecting the humidity, which is provided in an electrical wiring (3) of an ionization electrode (2). The detector is arranged in parallel or in series with the ionization electrode. The detector detects electrical conductivity or electrical capacity or a change in electrical conductivity or electrical capacity. Independent claims are also included for the following: (1) a heater with a heater component; and (2) a method for operating a heater monitoring device.
