Abstract (en)  
[origin: WO2010085152A1] Insert to be used with different types of water outlets, such as shower heads, water taps, hoses for watering and so on. The insert has a mouthpiece (1) with a central axial channel (8) for through flow, and a rotationally symmetrical deflector element (6) for the water is situated in the vicinity of the outer mouth of the channel. The deflector element (6) is held in place by a stem (3) with radial clearance to the channel, and surrounded by a conical surface (7). The mouthpiece (1) delimits a cavity (9) around and axially outside the deflector element (6), and the conical surface (7) converges axially outwards. The end of the stem (3) opposite of the deflector element (6) is connected to a head (10), which head has at least one bore which supplies water to the channel (8). A regulator (1 1, 21, 23) to achieve a substantially constant flow of water independent of the supply water pressure, is integrated in the head (10). The regulator comprises substantially axial grooves (1 1 ) on the outside end of the head (10) and an O-ring (21) which is placed around the grooves (1 1 ) and is influenced by the water pressure, and successively is being pressed into the grooves with increasing water pressure.
