Abstract (en)
[origin: WO2010083857A1] The invention relates to a container for transporting and storing goods, having a container floor (2) and at least two side walls (1, 1a) that can be folded over one another, wherein the side walls (1, 1a) that can be folded over one another are jointly hinged to the container floor (2) by means of hinges (3), and the hinges (3) are jointly supported by hinge pins (4) in hinge pin receptacles (5). The hinge pin receptacles (5) thereby comprise recesses (8) designed such that the hinge pins (4) can be displaced in the hinge pin receptacles (5) from a lower end position in which the folded side wall (1) contacts the container floor (2) to an upper end position, so that the two side walls (1, 1a) can lie on top of one another in a planar manner.
