Abstract (en)

[origin: WO2010084396A2] The ironing machine, particularly for ironing garments such as shirts, jackets or the like, comprises a bearing structure, a support element supported by the bearing structure and intended to support a garment with sleeves to be ironed, at least one tensioning element engageable with the free end of a sleeve of the garment and suitable for stretching the sleeve during ironing. The machine comprises a heatable plate with a substantially concave and curved heating surface, which can be moved to come into contact with a substantially end portion of the sleeve, at the height of the vent of the sleeve.
