Abstract (en)

Case-container made of a blown plastic material which has two double-wall parts made of a blown plastic material articulated by a hinged connection and with a closure system for the case-container. This defines an inner space for housing articles and having in said inner space forming elements which, with the case-container in the closed position, form at least one close-fitting reception cavity for an article. Said hinged connection comprises a double-wall base part made of a blown plastics material, said base part defining a support base for the case-container and a side wall. The upper portion of the base part has at least one hinge element for joining to each of said two parts made of a blown plastics material. In the closed position of the case-container, the two parts made of a blown plastics material rest on the base part and are in contact with one another.
