Abstract (en)
[origin: EP2390071A1] The saw has a see-saw (5) pivotably supported at a frame (4) around an axle. The see-saw is provided with an accommodation channel (12) for accommodating cutting goods. The see-saw is provided with a covering device (20), which pivotably covers an upper access side of the channel, and with a holding down device (21), which is pivotably actuated outside the channel and is brought in engagement with the cutting goods. The covering device and the holding down device are movably decoupled and are relatively brought together in a holding down direction and/or a covering direction.
