Abstract (en)

A device for checking the number of aluminium packaging sheets (4) positioned one over the other into a packaging box (3) during the conveyance of said box, comprising: - a transmitting head (1) that generates an alternating magnetic flux, - a receiving head (2) arranged opposite said transmitting head, - conveyors means (5) for conveying said packaging box (3) between said heads (1, 2) and said alternating magnetic flux, - said receiving head (2) detecting at least an alternating magnetic flux transmitted through said packaging box (3) when said box is conveyed between said heads (1, 2) and between the alternating flux emitted by said transmitting head (1), and generating a corresponding signal, - and means (6) for determining on the basis of said signal whether or not in said packaging box there is a predetermined number of aluminium packaging sheets, - said transmitting and receiving heads (1) comprising a coil (8) and a support element (7) wherein said transmitting and receiving heads (1, 2) comprise a non-conductive material case (9) for housing said coil (8) and said support element (7).
