Abstract (en)

An emptying apparatus, particularly for deformable containers, comprising at least one conveyance line (2) for deformable containers (A), which is interposed between a loading station (3) and an unloading station (4). The emptying apparatus comprises at least one processing station (5), which is arranged along the conveyance line (2) and is partially shielded. The processing station (5) comprises at least one cutter (6), which rotates along a trajectory that affects the containers (A), conveyed by the conveyance line (2), in order to cut them and consequently empty them of any substances contained therein.
