Abstract (en)

[origin: EP2390224A1] The system (B) has two distant conveyor devices (F1, F1') and two close conveyor devices (F2, F2'), which are provided at a feed conveyor and/or a discharge conveyor (A). The latter conveyor devices close to a synchronized operated container treatment machine comprises a conveyor line (T2) narrower than a conveyor line (T1) of the distant conveyor devices. Container-discharge-and/or-delivery-interruption of conveyor line differences of the conveyor devices is compensated, where the interruption is conditioned by clock downtime (9a) of the machine. An independent claim is also included for a method for treating containers in a container treatment system.
