Abstract (en)

[origin: EP2390415A1] The apparatus has a grinding frame formed at a running surface (8) of a rail (3). The grinding frame is adjustable and movable along the rail. A grinding body (6) encloses an acute angle to the longitudinal direction (L) along an axis of rotation. An arrangement of the grinding body is selected, such that the sum of the movement of the grinding frame occurs at the grinding body along the rail.
