Abstract (en)

The exciter (100) has an exciter shaft rotatable around a rotation axis and comprising an exciter weight (120) that is arranged at the exciter shaft. A reverting weight (130) is arranged relative to the exciter shaft in a rotary movable manner. The reverting weight is rotated around another rotation axis, where the former rotation axis and the latter rotation axis are axially displaced together and lie parallel to each other. The exciter shaft and exciter weight are designed as a single piece. The reverting weight is supported at the exciter weight at a bearing (131) via a bearing pin (135).

Abstract (de)

Die Erfindung betrifft einen Schwingungserreger für ein Bodenverdichtungsgerät mit einer Erregerwelle mit wenigstens einem daran angeordneten Erregergewicht und mit wenigstens einem Umschlaggewicht, das relativ zu dieser Erregerwelle drehbeweglich angeordnet ist. Die Erfindung betrifft ferner ein Bodenverdichtungsgerät mit einem solchen Schwingungserreger.
