Abstract (en)

[origin: EP2390462A1] The method involves releasing a support from a hollow interior space (5) and installing a cartridge (11), in deployment position, in the hollow interior space of a chassis (3) of a distributor (1) to install a tube section on the support in the deployment position. A deployment cone (14) is connected to the chassis. The tube section is connected to a portion of an air duct. An introduction cone is arranged at one of ends of the support, before threading the tube section on the end of the support. An independent claim is also included for a device for installing an air duct, comprising a support cylinder.
