Abstract (en)

[origin: EP2390561A1] The light emitting diode projection module (10) has a high beam module (11) provided with a light emitting diode source of light (12) for sending high beam over a light output surface (11a). The distance of the light output surface for projection lens (15) is smaller than the distance of another light output surface (13a) for the projection lens along an optical axis (16). A boundary surface (17) of the high beam module is extended before the latter light output surface.
