Abstract (en)

[origin: WO2010085983A1] A manufacturing process of a hot stamped coated part comprising the following successive steps, in this order: providing a hot rolled or cold rolled steel sheet comprising a steel substrate and an aluminium or aluminium-alloy precoat, the precoat containing more than 50% of free aluminium and having a thickness comprised between 15 and 50 micrometers, then cutting the steel sheet to obtain a precoat steel blank, then heating the blank under non protective atmosphere up to a temperature T_i comprised between $T_e - 10^\circ\text{C}$ and T_e , T_e being the eutectic or solidus temperature of the precoat, then heating the blank from the temperature T_i up to a temperature T_m comprised between 840 and 950°C under non protective atmosphere with a heating rate V comprised between 30°C/s and 90°C/s, V being the heating rate between the temperature T_i and the temperature T_m , in order to obtain a coated heated blank, then soaking the coated heated blank at said temperature T_m for a time t_m comprised between 20s and 90s, then hot stamping the blank in order to obtain a hot stamped coated part, then cooling said stamped part at a cooling rate in order to form a microstructure in the steel substrate comprising at least one constituent chosen among martensite or bainite.
