Abstract (en)

[origin: WO2010088172A1] A novel razor cartridge package suitable for protectively storing a razor cartridge is disclosed. The package includes two or more connected containers (12a, b, c, d) with a cover for covering the top perimeter of each container. The cover may be plastic, flexible and adhesively sealed to the container such that a user can peel the sheet back to open and access an individual razor cartridge. It may also be resealable. The covers may have a cover sheet separability line (13a, b, c, d) (e.g., perforations) between them to allow for easy peeling. The connected containers may or may not be removable from one another and if removable, may be secured together via a container separability line, allowing a user to pull off one container, having one cartridge inside, from the package at a time. The container and cover sheet separability lines may be aligned and may or may not be formed at the same time.
