Abstract (en)
[origin: WO2010088175A1] A novel razor cartridge package suitable for protectively storing a razor cartridge is disclosed. The package includes two or more connected containers (12a,b,c,d) with individual covers (14a,b,c,d) for covering the top perimeter of each container. The covers may be plastic, flexible and adhesively sealed to the container such that a user can peel the cover sheet back to open and access an individual razor cartridge. The individual covers and/or tabs (11a, b, c, d) coupled to the covers are arranged in an overlapping manner so as to direct the consumer to remove the covers in a predetermined sequence.
