Abstract (en)  
[origin: WO2010086161A1] The invention relates to a lock-box for an electronic lock, comprising a lock-box for an electromagnetic lock having a housing (1), in a first box half (2) that is positively connected to a first handle for actuating the lock, wherein the first box half (2) has an actuating element for an unlocking linkage (20), a second box half (5) that is positively connected to a second handle for actuating the lock, restoring elements (9, 10), a coupling element (6) that (a) allows the first (2) and the second box halves (5) to move relative to one another in a rest position and (b) connects the two box halves (2, 5) to one another in an operating position, a motor (7), a control device (8) and an energy supply, wherein the coupling element (6) has a pivotable articulated arm (11) which is mounted on the housing (1) and engages in recesses (12, 13) of the two box halves (2, 5) in the operating position (b) such that the lock can be opened via the second box half (5) upon actuating the second handle.
