Abstract (en)

[origin: EP2214064A1] The movement has a barrel (1) including a barrel drum (5) which houses a mainspring. An end of the mainspring is connected to a barrel arbor (4). The drum defines a primary level in a direction of thickness of the movement. A finishing gear train, formed by a drive pinion (15), comprises a center driving gear (13) engaged with a transmission wheel (10) rotatably secured to the barrel arbor. The gear is rotatably mounted on a frame according to a rotation axis vertically adjacent to the drum in the direction of thickness of the movement so as to define a secondary level.
