Abstract (en)
[origin: EP2392405A2] The separator has a centrifuge drum (1) with a drum lower part (2) and a drum upper part (3), in which a product to be processed is guided through an inlet pipe (8) and a distributor (7). The centrifuge drum is rotatable around a rotational axis (D). A discharge for picking up the solid phase is formed in the drum lower part of the centrifuge drum. The discharge leads from an outer radius (R-13) in solid space (27) in the centrifuge drum to an inner radius (R-17) of a discharge chamber in the centrifuge drum.
