Abstract (en)
The invention provides an inside widening method capable of reducing a difference in appearance between front and back while preventing a hole from being formed at a forming area of a widening stitch using a flat knitting machine, and a knitted fabric knitted by applying the inside widening method. A starting point stitch 1 and a terminating point stitch 2 are set, and steps (1) to (3) are performed. (1) A preparation step of forming stitches 4, 6 on the starting point stitch 1 and the terminating point stitch 2, and forming pick-up stitches 3, 5 on a knitting needle at a position substantially facing the knitting needle on which the starting point stitch 1 and the terminating point stitch 2 are held. (2) A widening stitch formation step of forming new stitches 7, 9 (widening stitch) on the pick-up stitches 3, 5. (3) A widening stitch arraying step of allocating the widening stitches 7, 9 formed in the widening stitch formation step and the stitches 4, 6 (10, 11) formed in the preparation step such that positions do not overlap in the longitudinal direction of the needle beds by racking of the needle beds and the transfer of stitches.
