Abstract (en)

[origin: EP2392740A2] The system has an eccentric spiral pump (1) for sucking waste water from a collecting tank (4). A crushing device is arranged on a suction side of a motor shaft and driven by the motor shaft. The pump is arranged at a distance from the collecting tank and connected with the crushing device and the collecting tank by a suction line (3). Cross section of a pressure pipe (13) projecting from the pump amounts to one-third to one-tenth of cross section of the suction line. The pump is arranged within a building, and the collecting tank is arranged outside the building. The system is provided with a flexible pump stator that is made of rubber or soft plastics.
