Abstract (en)
[origin: EP2392747A2] The present invention relates to a screen device, comprising a screen which can be rolled up onto and rolled down from a screen roller, a bottom lath (1), one or more lath guides (3) and a tensioning system to tension the screen in the roll-up and roll-down direction, said screen device being provided with a protection component to prevent the bottom lath (1) from becoming detached from the lath guides (3) when the tension of the screen on one of the lateral sides of the screen drops, in the form of a blocking element (7) which is provided at an end of the bottom lath (1) and a blocking profile (5) which extends along a lateral side of the screen.
