Abstract (en)

[origin: EP2392890A1] The method involves preparing target data i.e. target coordinates, where a missile (22) on a target (20) is controllable based on the target data. The target data is transmitted to the missile for controlling the target. Intelligence data from an intelligence sensor (28) is processed to detection support data by a missile directing system (26), where the detection support data contains information overlapping the target data for detecting the target. The intelligence data is transmitted to the missile. An independent claim is also included for a missile directing system with a process unit.
