Abstract (en)
[origin: WO2010089143A1] This invention relates to a device for machining, in particular for cleaning, grinding, polishing or activating work pieces, in particular car bodies or wind turbine blades, having a carrying apparatus (1, 47) which carries at least one machining apparatus (25) having machining means (26, 41), wherein the machining apparatus acts jointly with a control apparatus. The machining apparatus (25) has at least two modules which are arranged in series and have machining means (26, 41), said machining means being preferably designed as rolls, which adapt to the outer contour of the work piece during the operation of the device and are operatively connected thereto.
