Abstract (en)
[origin: WO2010003259A1] A closure for a beverage container is disclosed. Said closure comprises an inserted element (2) and a closing member (3) which can be inserted into a mouth of the inserted element (2). A first engaging structure (22) mounted on the internal face of the inserted element (2) can be connected to a second engaging structure (36) arranged on the external face of the closing member (3). The inserted element (2) further has a funnel section (25) above the first engaging structure (22). The closing member (3) has a closed top surface (32), a handle element (31), and an apron (35) with outlets (33). The engaging structures (22, 36) are designed such that the closing member (3) can be moved relative to the inserted element in a vertical direction between a first position in which the closing member (3) seals the mouth and a second position in which the outlets (33) open passages for a liquid.
