Abstract (en)

[origin: WO2010089382A1] The present invention relates to a transparent glass body that comprises at least one anti-reflective glass surface (2) constructed on at least one surface of the transparent glass body and at least one glass-like protective coating (3) applied to the anti-reflective glass surface (2). The portion of reflected radiation ER is minimized, and the transmitted radiation ET is increased accordingly. The contamination amount K can penetrate the anti-reflective surface only to a very reduced extent. Degradation caused by weathering is minimized. The present invention further relates to a method for producing a transparent glass body and to the uses of a transparent glass body.
