Abstract (en)

[origin: WO2010089786A1] The invention concerns a circular knitting machine for hosiery and/or knitwear comprising a rotating cylinder with a plurality of needles disposed and movable vertically, and a dial subject to rotation together with said cylinder around a vertical axis and carrying a series of needles placed horizontally and moveable in radial grooves. Each of at least one part of the needles (12) on the dial is associated with a sinker (13) controlled and designed to interact with the respective horizontal needle during the formation and slipping of each stitch, when the needles on the dial are working independently from the cylinder needles.
