Abstract (en)

[origin: WO2010088928A1] The invention relates to a method for feeding a multiphase electric network (14) by means of an electric generator (1) of a regenerative energy source, said generator being connected to the network (14) via an inverter (4, 5, 6). In the event that an asymmetric network fault occurs, according to the invention the feed to the phases not affected by the fault is interrupted and a current effecting voltage backup for the network is fed into the affected phases (FIG. 1).
