Abstract (en)

[origin: WO2010088893A1] The invention relates to a method for air conditioning by way of a ventilation system, wherein, in order to set a specified target air state characterized by air humidity and air temperature, air having an initial air state is cooled and dehumidified with the help of an air cooler (10), in that a coolant supply apparatus assigned to the air cooler (10) for a coolant supplied to the air cooler (10) regulates both a coolant mass flux and a coolant inlet temperature in accordance with the initial air state and the specified target air state. Moreover, an apparatus for air conditioning is provided.
