Abstract (en)

[origin: WO2010089192A2] A refrigeration appliance comprises a vertically adjustable tray for refrigerated goods. A drive mechanism for the vertical adjustment of the tray for refrigerated goods has a handle piece (18) which can be moved along a front edge (5) of the tray for refrigerated goods in a linear manner and at least one element which is rotationally driven via the handle piece (18). The handle piece (18) is coupled to the rotationally driven element via an arm (17) which can be pivoted about an axis and which is movably connected to the handle piece (18) in the depth direction of the tray (4) for refrigerated goods.
