Abstract (en)
[origin: WO2010089193A2] The invention relates, among other things, to an auxiliary device (13, 32) for a household appliance (1, 31), comprising an output module (15) having a data storage (27) and having a wireless transmitter (25) connected to the data storage (27), in particular based on UMTS and/or GPRS, for transmitting data stored in the data storage (27) to a central database (30), and an input module (14, 36), which is provided to be connected to a household appliance (1, 31) and equipped to collect data that is associated with operational modes associated with the household appliance (1, 31), and to transmit said data to the output module (15) so that said data is stored in the data storage (27).
