Abstract (en)  
[origin: WO2010088886A1] An illumination assembly is provided, comprising - at least one luminous element (1) having at least one luminescence diode chip (11) as the light source, and - at least one energizing means (3) connected to the at least one luminous element (1) by a connection line (2), wherein - the energizing means (3) is equipped to energize the at least one luminous element (1), and - the energizing means (3) comprises at least one filter element (4) which is equipped to filter signals received by the energizing means (3) from a power supply (7) for the energizing means (3) and emitted by the energizing means (3) to the power supply (7).
